

ABHISHEK PANIGRAHI

AI Engineer — AI/ML & Full-Stack

+91-7991099606 · abhishekanpanigrahi2244@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

SUMMARY

Results-driven Software Engineer with 1.5 years of production-grade experience translating complex business requirements into scalable, enterprise-ready AI solutions backed by cross-functional delivery and consistent outcomes.

EDUCATION

B.Tech. Computer Science — AI & ML Specialization

Vellore Institute of Technology, Chennai

2021 – 2025 | CGPA: 8.54/10

PROFESSIONAL EXPERIENCE

Software Engineer | [Prodapt Solutions](#), Chennai Jul 2025 – Present

Architected and deployed Generative AI applications leveraging LLM integration and the Autogen multi-agent framework, engineering end-to-end NLP pipelines and production-ready FastAPI REST endpoints that enabled non-technical stakeholders to consume AI services at scale — accelerating client-facing delivery timelines and reducing time-to-insight across multiple enterprise workstreams.

Software Engineering Intern | [Prodapt Solutions](#), Chennai Jan 2025 – Jun 2025

Developed ReactJS/SPFx frontend modules integrated with REST APIs, enabling internal teams to access AI-powered enterprise services through intuitive self-service interfaces — contributing to cross-functional Agile sprints and consistently delivering sprint goals on schedule while reducing manual workflow steps for end users.

AWS Cloud Practitioner Certification | AWS | Jan 2024

KEY PROJECTS

AI Form Extractor for Medical Documents | *Python, Gemini API, RAG, pytesseract*

Delivered an automated document intelligence solution combining OCR, RAG architecture, and Gemini LLM to transform unstructured medical PDFs into structured JSON — eliminating manual data entry, accelerating patient record processing, and delivering an EHR-integration-ready pipeline that supports compliance-grade data traceability at scale.

FeatureSmith — Open-Source Python Package | *Python, scikit-learn, pandas, LightGBM*

Published on PyPI (MIT license) · pypi.org/project/featuresmith/

Authored and published an open-source ML/NLP Python library (PyPI, MIT) that automates end-to-end feature engineering — spanning feature generation, selection, and data leakage detection — enabling seamless plug-and-play integration with scikit-learn pipelines and reducing model development cycle time for both Kaggle and production ML teams.

SPFx Ignite — VS Code Extension | *TypeScript, VS Code API, Gulp, SPFx*

Published on VS Code Marketplace · [Gulp Runner - SPFX Ignite](#)

Engineered and published a developer productivity VS Code extension that replaces multi-step SPFx Gulp terminal workflows with a single-click sidebar UI — featuring auto workspace detection, live environment validation, real-time log streaming, and persistent build history — eliminating context switching, accelerating developer onboarding, and improving day-to-day build efficiency for enterprise SharePoint teams.

MPLOYEE — Employee Management System | *ReactJS, ExpressJS, MongoDB (MERN)*

Architected a full-stack MERN application delivering a 40% improvement in initial load performance through lazy loading and code splitting — driving higher user adoption for internal HR operations while implementing RBAC, JWT authentication, and real-time dashboards to enable secure, self-service employee management across multiple access tiers.

Real-Time Sign Language Detection | *Python, TensorFlow, OpenCV, LSTM*

Delivered a real-time sign language detection solution leveraging LSTM-based gesture recognition at 98.59% accuracy — addressing a critical accessibility gap by reducing communication barriers for hearing-impaired users and demonstrating production-grade reliability through an end-to-end deep learning and computer vision pipeline.

TECHNICAL SKILLS

AI / NLP / ML: LLM Integration, RAG, NLP Pipelines, Feature Engineering, Autogen, CrewAI, Langchain, LangGraph, Azure AI Foundry

Backend & APIs: FastAPI, Node.js, Express.js, REST APIs, WebSockets

Frontend: ReactJS, Next.js, SPFx, TypeScript, HTML5, CSS3

Programming: Python, JavaScript, TypeScript, C++, SQL

Databases & Tools: MongoDB, MySQL, Git, Linux, Vercel
